

JANUARY 2023 EDITION

The infographics below show selected key National Health Indicators for diseases of public health importance over the last six months

HEALTH FACILITY REPORTING RATE

The reporting rate for the month of January 2023 is 89.5% at the time of this report.

We encourage states to continue to deploy mobile devices and computers for direct reporting to the DHIS-2 as it is more cost-effective and enhances data quality.

Figure 1 shows the national reporting rate for the past 6 months.

FEDERAL MINISTRY OF

Figure 2: Health Facility Reporting rate(Facility Type)

Primary Secondary Tertiary

Figures 2 & 3 show facility reporting rates by facility type (primary secondary and tertiary) and ownership (private and public) for the month of January 2023

N:B. Differences in national reporting rates due to facilities that are not classified by type and or ownership

FACILITY ATTENDANCE

Figure 4 shows the trend of general facility attendance and outpatient attendance from August 2022 to January 2023.

MATERNAL HEALTH (ANC AND PNC)

Figure 5 compares ANC to deliveries by skilled birth attendants and post natal care visits in reporting facilities from August 2022 to January 2023.

Figure 5: Continuum of care during pregnancy, labour and delivery

IMMUNIZATION

Figure 6 compares the total BCG vaccines given at birth to total live births in reporting health facilities. The total BCG vaccines given were more than the total live births in the facility for the same period.

This partly due to a combination of fixed immunization sessions (in the facility) and outreach/mobile (within the community) immunization services data which covers for under-1 children delivered both in the community and at facilities.

TOTAL FEVER CASES, MALARIA RDT AND MICROSCOPY TESTED POSITIVE

Figure 8 shows fever cases, malaria diagnosis using rapid diagnostic testing and microscopy testing in reporting facilities.

-- Fever Cases -- Malaria RDT tested positive -- Malaria Microscopy tested positive

UNDER 5 DEATHS

Malaria and Pneumonia diseases remain some of the leading causes of under-5 deaths in Nigeria.

All states are encouraged to train their health workers on proper reporting of diagnosis and management of diarrhea disease.

States are also advised to intensify efforts in the prevention treatment and overall control of pneumonia and malaria. Figure 9: Causes of under 5 deaths - Diarrhoea

Figure 10: Causes of under 5 deaths - Malaria

Figure 11: Causes of under 5 deaths - Pneumonia

Figure 12: Under 5 Deaths by Malaria and Pneumonia

Malaria remains the leading cause of death among under-5 children in the country. The value reported for the month of January 2023 is 331 deaths, lower than the previous month, December (388 deaths)

HEALTH SERVICE UPTAKE

The onset of the COVID-19 pandemic led to the deployment of several measures to curb the spread of the virus. Consequently, health services uptake was also affected as citizens adhered to strict lock-down measures which led to reduction in certain health delivery services at health facilities.

The analysis below presents data on selected health service indicator: In-patient, out-patient admissions (Figure 13), and deliveries by skilled birth attendants (Figure 14).

Cases of COVID

Figure 15a (below) provides analysis of confirmed cases, January 2023. Figure 15b provides a state distribution of confirmed cases in the country for the reporting period

Confirmed Cases of COVID

Figures 16 and 17 display confirmed recoveries from COVID-19 and cumulative deaths across states for the month of January 2023, respectively.

NHMIS BULLET National Health Management Information System

JANUARY 2023 EDITION

THE NATIONAL MSDAT PLATFORM

Recognizing that data quality, trends and interpretation depend on the data source and methodology, the platform offers comparisons of key metrics across three categories of data sources, namely; routine, surveys, and global estimates.

https://msdat.fmohconnect.gov.ng/central_analytics

RMNCH

- -Adolescent Birth Rate
- ANC Visit (4 visits)
- ANC Visit (at least 1 visit)
- Contraceptive Prevalence Rate
- Percentage of children with diarrhoea who
- received
- treatment
- Postnatal Care Coverage (mother)
- Prevalence of diarrhoea - Prevalence of Symptoms of Acute Respiratory
- Infection
- among under 5 Children
- Proportion of children under 5 with ARI who received
- treatment Skilled Attendance at Delivery or Birth
- Total Fertility Rate
- Unmet Need for Family Planning

MALARIA

- Percentage of children under 5 with fever who received ACT
- Percentage of women 15-49 years who received at
- least one IPT dose during pregnancy
- Percentage of women 15-49 years who received two or more IPT doses during pregnancy
- Prevalence of malaria among under five children
- (microscopy positive)

AVAILABLE PROGRAM AREAS

NUTRITION

- Percentage of children under 6 months who were exclusively breastfed
- Prevalence of Stunting among under 5 children
- Prevalence of Wasting among under 5 children
- Underweight prevalence among under 5
- Vitamin A supplementation coverage.

IMMUNIZATION

- against
 - childhood diseases by age 1

NUTRITION

Percentage of people age 15-49 years who have been tested for HIV and know their results

- Percentage of pregnant women tested for
- HIV during antenatal care
- Prevalence of HIV

IMMUNIZATION

- Infant Mortality Rate
- Maternal Mortality Ratio
- Neonatal Mortality Rate (per 1000 live births)
- Under 5 Mortality Rate
- Pregnancy-related mortality

- children

- DPT3/Penta 3 Coverage Rate
- IPV Coverage Rate
- Measles Immunization Coverage

- Percentage of children fully immunised

THE NATIONAL HEALTH S ERVICE UP TAKE DAS HBOARD

Nigeria Health Analytical Tool showing Health Service Uptake (during the COVID-19 Pandemic) allows you to compare health service uptake on a monthly basis using key metrics as reported from health facilities across the country through the Nigerian National Health Management Information System (NHIMS).

It compares the trend from the most recent months to trends in the past year.

Use the menus to select indicators and states for analysis. Each section allows for different types of comparative analysis.

| | Toda bilines . 1998 Anda | n Haddi Tacily Konay Bala Parilas Dirar Saddaarda T |

Note: While data quality may vary, trend analysis compared to the previous month and year is useful in determining whether health service uptake has been affected relative topast trends.

For more analysis, visit: https://msdat.fmohconnect.gov.ng/covid19_health_service_uptake/index.html

JANUARY 2023 EDITION

THE NATIONAL DIGITAL ISS/DQA PLATFORM

All States and the FCT are encouraged to use the digital Integrated Supportive Supervision (ISS)/Data Quality Assessment tools which have the following:

i. Smart data collections forms; ii. Almost instant individual facility analyzed reports to track changes and for programming, iii. Images, and iv. Multiple reviews, v. Facility Score after each review and many more.
