

The infographics below show selected key National Health Indicators for diseases of public health importance over the last six months

HEALTH FACILITY REPORTING RATE

The reporting rate for the month of April 2025 was 91.4% at the time of this report.

We encourage states to continue to deploy mobile devices and computers for direct reporting to the DHIS-2, as it is more cost effective and enhances data quality.

Figure 1 shows the national reporting rate for the past 6 months.

Figure 1: Health Facility Reporting Rate Version 2019

■ NHMIS Monthly Summary (Version 2019) Reporting Rate

HEALTH FACILITY REPORTING

Figures 2 & 3 show facility reporting rates by facility type (primary, secondary and tertiary) and ownership (private and public) for the month of April 2025.

N.B. Differences in national reporting rates due to facilities that are not classified by type and or ownership.

Figure 2: Health Facility Reporting rate(Facility Type)

Figure 3: Health Facility Reporting Rate (Facility Ownership)

FACILITY ATTENDANCE

Figure 4 compares the total BCG vaccines given at birth to total live births in reporting health facilities.

The total BCG vaccines given were more than the total live births in the facility for the same period.

This is partly due to a combination of fixed immunization sessions (in the facility) and outreach/mobile (within the community) immunization services data which covers for under-1 children delivered both in the community and at facilities.

Figure 4: Facility General Attendance Versus Outpatient Attendance

MATERNAL HEALTH (ANC AND PNC)

Figure 5 compares ANC attendance to deliveries by skilled birth attendants and post-natal care visits in reporting facilities from November 2024 to April 2025.

Figure 5: Continuum of care during pregnancy, labour and delivery

IMMUNIZATION

Figure 6 shows the trend of general facility attendance and outpatient attendance from November 2024 to April 2025.

Figure 7 compares full immunization coverage for children below the age of one in Nigeria to total OPV and pentavalent vaccines 3 given from November 2024 to April 2025.

There is a need to maintain intensive outreach and mobilization for immunization services to continue high coverage.

Figure 6: Total live births and BCG given

Figure 7: Fully immunized <1 year, OPV, Pentavalent vaccines 3 given

TOTAL FEVER CASES, MALARIA RDT AND MICROSCOPY TESTED POSITIVE

Figure 8 shows fever cases, malaria diagnosis using rapid diagnostic testing and microscopy testing in reporting facilities.

Figure 8: Number of fever cases, Malaria RDT and Microscopy tested positive

UNDER 5 DEATHS

Malaria and Pneumonia remain some of the leading causes of under-5 deaths in Nigeria.

Malaria remains the leading cause of death among under-5 children in the country. The value reported for the month of April 2025 was 438 deaths.

The value reported for under-5 deaths due to pneumonia in April 2025 was 149 deaths.

All states are encouraged to train their health workers on how to properly report and manage these diseases. Additionally, more efforts should be made to prevent, treat, and control pneumonia and malaria.

Figure 9: Causes of under 5 deaths - Malaria

Figure 10: Causes of under 5 deaths - Pneumonia

Malaria remains the leading cause of death among under-5 children in the country. The value reported for the month of April 2025 was 438 deaths. The value reported for under-5 deaths due to pneumonia in April 2025 was 149 deaths.

Figure 9: Under 5 Deaths by Malaria and Pneumonia

HEALTH SERVICE UPTAKE

Figure 10 shows the analysis of selected health service indicators: inpatient and outpatient admissions. This is affected by several factors, such as healthcare access challenges, change in disease burden, etc.

Figure 11 shows deliveries by skilled birth attendants. While the overall trend is stable, efforts should be directed toward ensuring ongoing access to skilled care during childbirth to prevent maternal and neonatal complications.

AVAILABLE PROGRAM AREAS

RMNCH

- Adolescent Birth Rate
- ANC Visit (4 visits)
- ANC Visit (at least 1 visit)
- Contraceptive Prevalence Rate
- Percentage of children with diarrhoea who received treatment
- Postnatal Care Coverage (mother)
- Prevalence of diarrhoea
- Prevalence of Symptoms of Acute Respiratory Infection among under 5 Children
- Proportion of children under 5 with ARI who received treatment
- Skilled Attendance at Delivery or Birth
- Total Fertility Rate
- Unmet Need for Family Planning

MALARIA

- Percentage of children under 5 with fever who received ACT
- Percentage of women 15-49 years who received at least one IPT dose during pregnancy
- Percentage of women 15-49 years who received two or more IPT doses during pregnancy
- Prevalence of malaria among under five children (microscopy positive)

NUTRITION

- Percentage of children under 6 months who were exclusively breastfed
- Prevalence of Stunting among under 5 children
 - Prevalence of Wasting among under 5 children
 - Underweight prevalence among under 5 children
 - Vitamin A supplementation coverage.

IMMUNIZATION

- DPT3/Penta 3 Coverage Rate
- IPV Coverage Rate
 - Measles Immunization Coverage
 - Percentage of children fully immunised against childhood diseases by age 1

NUTRITION

- Percentage of people age 15-49 years who have been tested for HIV and know their results
- Percentage of pregnant women tested for HIV during antenatal care
 - Prevalence of HIV

IMMUNIZATION

- Infant Mortality Rate
- Maternal Mortality Ratio
 - Neonatal Mortality Rate (per 1000 live births)
 - Under 5 Mortality Rate
 - Pregnancy-related mortality

NATIONAL HEALTH MANAGEMENT INFORMATION SYSTEM, NIGERIA

THE NATIONAL HEALTH SERVICE UPTAKE DASHBOARD

Nigeria Health Analytical Tool showing Health Service Uptake (during the COVID-19 Pandemic) allows you to compare health service uptake on a monthly basis using key metrics as reported from health facilities across the country through the Nigerian National Health Management Information System (NHIMS).

It compares the trend from the most recent months to trends in the past year.

Use the menus to select indicators and states for analysis. Each section allows for different types of comparative analysis.

Note: While data quality may vary, trend analysis compared to the various month and year is useful in determining whether health service uptake has been affected relative to past trends.

For more analysis, visit: https://msdat.fmohconnect.gov.ng/covid19_health_service_uptake/index.html

THE NATIONAL DIGITAL ISS/DQA PLATFORM

Federal Ministry of
Health & Social Welfare
Federal Republic of Nigeria

All States and the FCT are encouraged to use the digital Integrated Supportive Supervision (ISS)/Data Quality Assessment tools which have the following:

i. Smart data collections forms; ii. Almost instant individual facility analyzed reports to track changes and for programming, iii. Images, and iv. Multiple reviews, v. Facility Score after each review and many more.
